Contents

Editorial 1

Languages and Systems for Computer-aided Instruction
Jack Schwartz 5

Cost-Effectiveness of Maintenance Simulators for Military Training
Jesse Orlansky and Joseph String 41

Basic Concepts in Knowledge-based Systems
Jesse M. Heines 65

Computer-Assisted Instruction and Compensatory Education: A Longitudinal Analysis
Marjorie Ragosta 97

Computer-Based Adaptive Instructional Systems: A Review of Empirically Based Models
Robert D. Tennyson and Okchoon Park 129

On-Line Task Analyses in Maintenance Simulation
J. Jeffrey Richardson 155

Instructional Effectiveness of an Intelligent Videodisc in Biology
C. V. Bunderson, B. Baillio, and J.B. Olsen, with J. I. Lipson and K.M. Fisher 175

Videotex and Education: Current Developments in Screen Design, Data Structure, and Access Control
Stephen T. Kerr 217

Development of a Hand-Held Computerized Vocabulary Tutor
Brent Bridgeman and Robert Wisher 255

Embedded Training: The New Look of Computer-Based Instruction
Greg Kearsley 279

Advanced Computer System Applications in Education: Emerging Advances in Hardware and Software
Paul E. Resta 297

The Next Generation of AI-Based Teaching Systems
Albert L. Stevens 313

Advancing Cognitive Science through Development of Advanced Instructional Systems
James G. Greeno 327

The Power and the Peril of the Particular: Thoughts on a Role for Microcomputers in Science and Mathematics Education
Judah L. Schwartz 345

Four Generations of Computerized Test Administration
Dillon K. Inouye and C. Victor Bunderson 355

Critical Research Issues in the Implementation of the Next Generation of Educational Technology
Alan M. Lesgold 373
